The device of the invention comprises an inductive loop, which is formed by a pair of loops which are wound around each other and connected at the ends thereof, and a shorting loop which is also connected at its ends to the loops and connects the loops to the primary winding of the inductive loop. The inductive loop itself is a torus winding. A device of this kind can be used in a high-frequency loop circuit to carry electromagnetic signals in air. The principle of such a circuit is described in U.S. Pat. No. 4,227,143, for example. The current circuit uses as the loop to be supplied a torus winding of an inductive loop. The main loop of the circuit is a second loop which has an inductance which is a multiple of the inductance of the primary winding of the inductive loop. The main loop itself forms a torus winding. The loop circuit as a whole has a resonant frequency of the order of the frequency of the current loop, and the current loop is formed in such a manner that a constant current flows through it. It is here assumed that the torus winding of the loop circuit is of such a shape that the closed loop formed by the windings of the loops is symmetric. In the device according to the invention, the shorting loop which has a sufficiently large cross section is wound around the torus winding of the main loop in such a manner that the loops which are connected to the shorting loop form two half loops in the torus winding. When a voltage is applied to the shorting loop, currents flow along the loops which are connected to the shorting loop, and the voltage is shared in such a way that each of the loops is connected to the shorting loop at one half of the total current. In this way, the two half loops of the main loop 70238732e0

Key Macro Manager installs a global keyboard shortcut that allows you to define a series of keystrokes into a macro. When you hit the global keyboard shortcut you get a dialog with several input fields that can be used to input any text string you want. With Key Macro Manager you can define the macro using the simple input fields that show up on the dialog. More Information Key Macro Manager is the ultimate solution to manage macros of your choice. Macros are like passwords to you; You can define macros which are part of your daily routine and inputted via simple input fields on Key Macro Manager. One can easily define macros like "To open a website from a bookmarks file," "to open a file from desktop by double clicking," "to open a specific application," "to open a video," "to open a music file." Key Macro Manager gives you the power to define macros for just about any action you can take, which increases the efficiency of your computer as well as enhancing its usability. Key Macro Manager can be used in the following ways. Input the text into the fields below to define macros. The macro you defined here will be shown to you whenever you hit the global keyboard shortcut you defined above. Once you press the Global Keyboard Shortcut you will be asked to input the command to execute the macro you defined. To execute the macro you can use "Get Text". To delete the macro, press "Delete". To save the macro, just hit the save button. To access the macro editor, you can press "Show All". To get the last key pressed, just click on the "Get Last Key" button. Once you defined your desired macro, you can simply hit the global keyboard shortcut you defined above to input the macro. Key Macro Manager also allows you to define macros for your favorite applications, including the following: * Open file * Open folder * Open web site * Launch program * Search * Open folder * Open URL * Copy text * Paste text * Open link * Open file * Open folder * Launch program * Search * Copy text * Paste text * Launch web site * Launch application * Launch link * Open the editor * Launch file With Key Macro Manager you
