In many cases, we don't have to guess: an employer will tell you, in no uncertain terms, exactly which skills are most important. But, even if an employer hasn't told you outright, you can get a sense of which skills they value and how important they feel they are to their business by watching the careers of other employees. Of course, you can't tell which skills are most important by simply watching employees. You need to know what the jobs in your industry require. And, here's where the career intelligence comes in. The Career Intelligence Report The Career Intelligence Report, an online career intelligence solution for business professionals, gathers job titles, requirements, and the career pathways for the most in-demand positions in the market and provides those insights to you. It also shows you how a job you're considering may fit the broader context of your career and how your skills and experiences align with your company's strengths and values. A Certified Career Intelligence Report subscription costs \$69/month, but it's a one-time fee and includes a personal career guidance session. In this month's Career Intelligence Report, we have gathered the top 10 most in-demand jobs in the market. The report shows you why you should consider these roles and what they can offer in terms of career development and opportunity. 10 Most in-demand jobs of 2018 Source: Career Intelligence Report, 2018 Job Title Skills & Attributes Needed Job Description Career Paths Partner at MarTech Ventures 01. Demand Generating Associate Understanding the customer journey and the drivers of customer demand across the organization, whether they are conversion, acquisition, retention, or any other driver. I have a javascript callback function: function(e) { //alert("in the callback function"); if(event.type == 'destroy'){ var message = "The window is going to be closed"; if(e) { alert(message); } window.external.MessageHandler(event, message); } //alert(event.type); } And the following code is running when the window is opened: window.addEventListener("message", messageHandler, false); When I close the window, this code is still running: //a close function is called window.close(); When I close the window, the alert box still pops up. Why does this happen? A: You've probably already got this, but the message parameter of window.external.MessageHandler will have to be the id of the message. For example: window.addEventListener("message", messageHandler, false); function messageHandler(event) { if (event.data.type == '2d92ce491b
