dance-drama films[Preparation of berberine-loaded PLGA microspheres and its release characteristics]. To prepare berberine-loaded PLGA microspheres and to study the release characteristics of the microspheres. The microspheres were prepared by solvent evaporation technique. The size of microspheres and entrapped berberine were measured by optical microscopy. The morphology of the microspheres was studied by scanning electron microscope. The in vitro release of berberine from the microspheres was determined by HPLC. The optimum preparation method was optimized by orthogonal design. The entrapped

berberine was 95.4% of the weight of PLGA microspheres. The optimum preparation method of the microspheres was as follows: dissolved the polymeric solution and microspheres in dichloromethane, then dispersed in aqueous medium. The average diameter of microspheres was 6.6 microm. The morphology of the microspheres showed that they had a core-shell structure. In vitro release study of berberine from the microspheres showed that the release of berberine was sustained in the first 12 h. The in vitro sustained release of berberine from the microspheres could be realized by solvent evaporation

method.Halloween (2) Halloween (2)

The evening began at about 6.30pm with the main meal of pizza and salad. Any gifts given were presented to the children by the guest speaker at the end of the meal. After a visit to the "cinema", guests were entertained by the choir, and then made to enjoy some spooky games in the art room.

Halloween (2) The evening began at about 6.30 2d92ce491b
