Omecamtiv Peptide-Depleted Human Vascular Smooth Muscle Cells Attenuate Peripheral Nerve Injury in Mice. Nerve injury results in chronic pain that is difficult to treat, and currently, there is no effective treatment. We hypothesized that omecamtiv peptide (OM) could be a potential therapy for nerve injury. However, the effect of OM in peripheral nerve injury remains to be established. Here, we investigated the effects of OM on the activity of dorsal root ganglia (DRG) neurons and dorsal root ganglion (DRG) neurons in culture. The data indicate that DRG neurons express the opioid ? receptor (MOR). OM inhibited MOR-mediated Ca²⁺ influx in DRG neurons, and this inhibition was dependent on the opioid peptide sequence (His-Tyr-Gly-Phe-Leu-Asp-Arg) of OM. Treatment with OM attenuated the nerve injury-induced mechanical all
