Category:1990s comedy filmsJuan Fernando Sucre Juan Fernando Sucre (born 14 November 1979) is

---

a Bolivian football midfielder who currently plays for Wilstermann in the Bolivian Primera División.

Career Sucre started his playing career in the youth ranks of La Paz Deportivo in 1997. He became a regular in the side during the 1998-99 campaign. In 2000, he moved to the Argentinian club Tiro

Federal where he also made an impact on the squad, winning the 2002 Copa Libertadores as well as the 2003 Recopa Sudamericana. In 2006, Sucre returned to Bolivia and joined Bolívar, where he spent the

---

first two years of his career. In 2008, he moved to Santos Laguna of Mexico for one season before returning to Bolivia. In 2013, he was signed by Bolivian side Wilstermann. filmoviQ: "The maximum number  
of trigger events allowed by the  
container has been exceeded."  
error I have a Java web application  
that has a menu-based tree  
structure. The menu tree is made  
up of trunks and branches. The  
program has a master branch to the  
tree and it is triggered when the  
user clicks on it. Each trunk has a  
nested branch. When the user  
clicks on a branch, the nested  
branch will be shown in another

---

window. When the user clicks on a branch, it will open a window. The program can handle up to 10 nested branches. It works fine until it exceeds that number. When it exceeds that number, it gives the following error: The maximum number of trigger events allowed by the container has been exceeded. So, I think this error is related to the nested branch opening. Here is the code related to the nested branch opening. When I click on a branch in the master tree, it is the following code. The

---

only thing I changed is I deleted the line saying message.println.

```
public void itemClick(Item item) {
    JFrame treeView = new JFrame();
    JMenuItem item1 = new JMenuItem(item.getItemName());
    item1.addActionListener(new ActionListener() { public void actionPerformed(ActionEvent e) {
        try { java.util.List items = new ArrayList(); items.add(item);
            ItemSelectionService itemSelectionService = new ItemSelectionService(items);
            itemSelectionService.go();
        }
    }
}}
```
