Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. The open-source and free cross-platform CATIA (Computer-Aided Design with Interactive Analysis) CAD software application is arguably the most sophisticated and robust CAD package available today. CATIA is available in both Windows and Linux flavors. Ad Ads from advertisers that appear on this website are collected by third party ad networks. History AutoCAD was initially developed by Dassault Systemes, then S.A. Autodesk bought the company in 1991 and added a number of new features to its products. The company was renamed to Autodesk in 1997, after the company's main shareholder acquired a majority stake. In 1999, Autodesk also added the premium version of the software to the application store Autodesk Exchange Apps, where AutoCAD application are distributed to the general public. The company used to build the Autodesk Exchange Apps from the AutoCAD source code. Despite the increasing number of updates, users always complain about the lack of new functionalities and new features. In 2014 Autodesk added the ability to publish and distribute AutoCAD content to other Autodesk products. In 2017 Autodesk has stopped supporting Linux as a platform for AutoCAD and discontinued development on Linux version in favor of Windows and macOS. Autodesk made a comprehensive survey of AutoCAD users in the United States (2016), Germany (2015), Japan (2013), and Italy (2013) to find out the reasons of using and not using AutoCAD. The survey concluded that the main reason to purchase AutoCAD is CAD functionality. Though, Autodesk later stopped supporting Linux as a platform for AutoCAD and discontinued the development of Linux version. Feature summary AutoCAD is a very powerful and feature rich CAD software. The following is a brief list of features: Modeling: this feature, which is based on the UML, allows creation and editing of any object, which has a logical and mathematical description. At the same time, every model is a set of drawings, which form a single drawing (paper file). Forms: includes the

ability to create forms and two-dimensional bounding box. Form lines and form objects are grouped together in such a way that they can be viewed in a single view. 2D drafting: performs 2D drafting, including dimensioning, standard section and curved section drawing, dimension extension, detailed tools and editing such as coping, placing, moving and dimension drawing. 3D drafting: enables creation of three-dimensional forms using the 3D modeler. 3D modeler is based on an algorithm of triangulation (3D matrix) or stereographic projections. It also offers 3D editing tools such as 3D section and creating solid, surface and volume models. NURBS: The

US workers could be moving to China in the next two decades, threatening jobs and the broader economy, according to a report out Tuesday. In a scathing review of the U.S. economic picture, the bipartisan Congressional Budget Office (CBO) warned that American firms may be bidding jobs overseas in hopes of attracting better pay and benefits. "We project that U.S. workers will be among those disadvantaged by labor-market trends," said the report. "Lower-skill workers are projected to be the most affected." The CBO said the economy may grow faster than projected, and that global competitiveness will likely improve, but the United States will likely be slower to take advantage of these developments. The CBO is an independent legislative office in the U.S. Congress. The report also said that immigration could cause the American workforce to be more competitive and boost the economy, but that the benefits of that immigration may not be realized for many years. CBO said the United States faces a "growing labor supply of immigrant workers and an aging and declining population of U.S.-born workers" in the years ahead. It added that the influx of immigrants may add to competition for jobs. "In the long run, immigration, higher U.S. productivity, and the

retirements of U.S.-born workers are expected to slow the growth of labor demand,” said the report. “Immigration, productivity, and retirements could therefore dampen the U.S. economy’s output growth in the long run.” The CBO report was released just as Congress is trying to strike a deal to fund the government through March and avoid another partial shutdown. President Trump, who has made immigration a centerpiece of his agenda, is unlikely to support any deal that does not include funding for a border wall and other measures he has pushed. CBO said that the United States “will likely remain a low-unemployment economy with greater potential for output growth”
