The Markup import feature enables you to automatically incorporate comments from coworkers, stakeholders, or customers into your CAD drawings and applications. Import comments and annotations by exporting printouts or PDFs. Incorporate comments into your design effortlessly by using the keyboard shortcut or your annotation tool. After opening a document, you can choose to import comments from your printed paper or PDFs. You can also import comments from other CAD files, such as from other applications using AutoCAD or AutoCAD LT. The Markup Assistant feature enables you to place comments directly on a drawing. You can make the Markup Assistant dialog the primary tool for creating comments. To see the feedback in your drawing, simply select the comment from the Markup Assistant dialog and drag it to the drawing area. The Markup Assistant dialog is activated with the key combination Ctrl+E or use the Markup Assistant icon in the status bar. Markup option settings: The Markup Assistant dialog supports up to five comment types. The option settings are shown in the following table. Type of Markup Set Options Primary (blue) Use this option to place a comment into the AutoCAD file. Secondary (green) Use this option to place a comment into the secondary file (if applicable). Third-party (orange) Use this option to place a comment into a third-party file. 4th-party (red) Use this option to place a comment into a fourth-party file. Example: The 4th-party option is typically used to import a comment from a word processor. Each file has its own comment dialog, so the comment options on a document will not appear in the other files. You can use the Markup Assistant dialog as the primary tool for creating comments. When you use the Markup Assistant dialog, the text color and background color in the Markup Assistant dialog box will change to match the new text in the current drawing, and the comment placement options will be available. Setting the Markup Assistant dialog as the primary tool to create comments will affect the following comment types. The document name in the comment will use the name of the current drawing file (if applicable). (Note: Selecting the "Apply Markup" option will also update the name in the comment.) The comment will have its own color and the properties that you set on the "Apply Markup" option (see the "Setting Markup Options" section)
