References Category:AutoCADIt has become a trend to incorporate multimedia contents and/or interactive applications in a vehicle or in the context of vehicle-based multimedia contents. Such multimedia content may include, but is not limited to, moving images, video, computer games, educational resources, vehicle navigation systems, digital cameras, and the like. More and more vehicle manufacturers are offering the option of installing a system comprising a display, an interface, and at least one multimedia system, in the vehicle. Such systems may offer a number of benefits to the driver. For example, some systems may inform the driver about the current location of the vehicle and/or where the vehicle is supposed to be at a certain point in time. Moreover, vehicle manufacturers are increasingly offering interactive applications, such as music players, games, social media, or the like. In order to provide the driver with the most accurate and intuitive information, it is desirable that the system reacts to the driver's eye movements and gestures. As such, the system may read the driver's gaze direction or the direction of the driver's head movement in order to learn where the driver is looking at in the vehicle or the surroundings. In addition, the system may react to the driver's hand gestures, head movements, or voice commands. However, it is desirable that the device comprising such an eye gaze or hand gesture detection system is robust, accurate, and easy to integrate in the vehicle. In US 2012/0152669 A1, a head mounted display (HMD) system is disclosed, which is capable of detecting a position of the driver's head, a gaze direction of the driver, and a hand motion of the driver. The gaze direction is calculated based on a change in a direction of the driver's head movement. When the driver's head is positioned at a certain position within the display, the device comprising the HMD system can determine whether the gaze direction corresponds to a certain zone of the display. Based on the determination, the device comprising the HMD system can select a certain screen area, which is addressed to the driver. However, the device comprising the HMD system described in US 2012/0152669 A1 relies on the driver's head

Design auto-annotates your drawings with useful comments, shapes, dimensions, and more, and helps you make better design decisions. Use Markup Assist to quickly turn 2D and 3D drawings into new annotated drawings. AutoCAD lets you start, stop, pause, and resume your drawing session, even while you are viewing other drawings and working with other applications. Get more from your tool bars and ribbon menus with tabbed drawing and dialog bars. Customize the interactive elements on your interface by changing their colors and font sizes. Trace: Add, edit, and delete traces, plus bring up their properties and change their settings. Add and edit plot-created traces by simply selecting and manipulating existing traces. Graphic Tips provide visual information about a drawing, while Storyboard hints provide written information that is available in the status bar or tooltips. Automatic Wall Creation: Freeze shapes in their default positions to create walls, panels, and doors. Drag elements to new places in your drawing, for a faster way to build complex shapes. Turn a selected set of points into a single trace. Create a

solid wall by selecting a corner point or edge point. New AutoLayout: Create more accurate layouts by letting AutoLayout work its magic for you. Optimize your standard layouts by automatically re-creating them when you move, resize, or add and remove objects. Optimize a layout by specifying a preferred point for an object. This point may be an intersection or any other location along an edge. Analyze and visualize the effect of moving, resizing, and adding and removing objects to your layout. Use Multi-Trace and Grids to help you work more efficiently. Start and Stop Drawing from Scratch: Right-click and choose the option that starts the drawing you want. Choose an option to start from scratch or to update a previously started drawing. Load a previously saved drawing. Undo: Redo: You can undo many drawing operations with a single click of the Undo button. You can redo most drawing operations with a single click of the Redo button.
