What's New In?

Imp's Drive Info is a lightweight Windows gadget designed to help you keep an eye on the size occupied by files, directories, and programs on your partitions. It comes in handy for all users who are currently installing large programs on the computer or downloading a large number of files on a daily basis, as it keeps them up-do-date with how much space is left on the disk. The user interface is really simplistic and offers only a few configuration settings to tinker with. Basically, it's extremely easy to work with this gadget, as you only need to select the drives from the preset list, and the application automatically displays the details about the disk size, as well as percentage information. Imp's Drive Info is able to display disk size data for multiple drives. Since there aren't many dedicated parameters, even less experienced users can master the entire process with minimum effort. Other options give you the possibility to make the gadget remain on top of other utilities, move it to any area of the screen, as well as pick the opacity level. As it would be expected from such a small utility, it manages to remain light on the system resources, so it doesn't burden the overall performance of the computer, nor interfere with other programs' functionality. All things considered, Imp's Drive Info is a desktop enhancement utility that allows you to view disk size information. It can be easily configured and installed by all types of users, regardless of their experience level. 0 comments Sign-Up Sign up to get the latest information about Newegg offers and more The email address to which this account will be billed.
