Exifcoder works with most common image formats, such as JPEG, BMP, ICO, PNG, GIF, TIFF, and TGA. Other supported formats include PDF, PSD, XPS, PCX, PS, and RAW. The program is extremely light on system resources, and besides, it's very easy to use. Now, let's see how Exifcoder works.

1. Field of the Invention The present invention relates to door assemblies, and more particularly to a door assembly having a body and a lock, wherein the body is formed with a plurality of recesses, and the lock is provided with a pressing plate for engagement with the recesses.

2. Description of the Related Art A conventional door lock usually includes a main body, a latch and a bolt. The main body has a top side, a bottom side and a pair of legs. The latch and the bolt are disposed in the main body and each of the legs has a hole disposed in the same diameter with the latch or the bolt for allowing the latch and the bolt to move therethrough. However, when assembling the conventional door lock, the latch and the bolt have to be inserted into the main body one by one and then the legs

are positioned to be received in the holes of the main body. Therefore, the conventional door lock is laborious and time-consuming. Further, it is difficult for the conventional door lock to match with the different specifications of the door panels, such that the conventional door lock cannot be applied in practical use.

Q: Explanation of CUDA Probability Example I have an excerpt of a CUDA program that reads as follows: // Sample uniform distribution on (-inf, inf) // ~~~~~ // C[a,b] = a + b*e^(-a^2) // // a = 0.0f // b = 0.0f // C[a,b] = 0.0f // C[-inf,inf] = 1.0f // // ::::::::::::::

DaZho has recently discovered a freeware which is basically designed to convert your images files to various formats for its ease of use. It is called DaZho Image Converter, and it is no doubt an easy to use image converter. It is a standalone software which is capable of converting image formats like BMP, TIFF, JPEG, JPEG 2000, JPEG XR, GIF, JPG, ICO, DNG, PNG, TGA, etc.

System Requirements: It can be run with Windows 2000/XP/Vista/7/8/8.1 Installed RAM should be more than 1.5 GB Installed Free disk space should be more than 50 MB

How to Use: If you want to start the utility, you just need to double-click on the file icon of the program in your hard disk and then wait until the conversion process is over. It's all about that simple. Every conversion takes about a few minutes. The conversion process can be carried out in two ways: manually and automatically. It depends on the type of files you want to convert. For example, if you want to convert BMP files to GIF, all you have to do is to select the BMP files in the folder and then click on "Convert". If you want to convert your JPEG files to PDF, select "PDF" as the file format in the file dialogue box and you're done. The two conversion methods are:

- 1) Manually: You can open the conversion dialog box and browse through the selected files or just type in the name of the files you want to convert. Then, you can either choose to convert them to the same file

type or different file types. Once you've selected a conversion type, you can click on the Convert button or click on the "Convert" drop-down menu. 2)

Automatically: There are many settings you can make in this program which make it much more easy to convert images into PDF files, etc. You can select the same settings for all images. You can also select different settings for every type of file. The most exciting thing about this program is the ability to convert videos, too. If you convert a video into a different format, you can go back and convert it into another format. There are many other formats, too. DaZho Image Converter can also convert a series of images into one video file. This video can be played in any video player you want
