AIV Reminder Download [32|64bit]

AIV Reminder is a simple and fun multi-purpose tool that allows you to set daily alarms or reminders for future events. It also functions as a desktop clock, a calendar and a stopwatch. Setting alarms for events to come You can plan ahead for many years and set reminders for events to come in future. Specify the date and time and let the selected character remind you of the forth coming event. The software enables you to set up to eight different alarms, and numerous reminders. You can easily reset an alarm field, by clicking on the dedicated button, then enter different data. Aside from the alarm, you may also add notes, in case you forget what the reminder is for, or in case you need to remember an important address, birthday or other piece of information. Remind yourself of future events Each reminder activates itself right before the event and an animated character appears on the screen. The character is, in fact, your personal assistant that appears every time you open the program, or when you prompt it. You can choose between Genie, Merlin, CAMI, the chameleon and Plany, the plane. Alternatively, the software can play a tune, that you set in advance. You can assign an MP3 or WAV file to each alarm, and when the time comes, it plays the audio. The file can be a song of your own choice or it can be your own voice. The software allows you to record yourself while speaking and use the voice as a reminder. Clock, stopwatch and calendar The software also serves as desktop clock, from the classic Roman numbers analog clock, with different frames, to the modern-looking digital display. Moreover, AIV Reminder features a stopwatch function and a calendar function. Thus, you may consult the calendar for many years ahead and schedule a distant exam, or other event. AIV Reminder has an option to play 2 mp3 files at the same time, so if you forget to turn off the other mp3s, they will still play. To remedy this, a key with 3 characters is used to specify which of the mp3s is disabled. The 3 characters are * (for the first one), + (for the second one), and # (for the third one). So you should enter ***# for the first file, **#+ for the second one and *#+*# for the third one. Very clear, easy to use with an AI
