The author describes a technique and its validity for reconstructive operations, such as function and form restoration. The specific features of cranial-facial deformities and residual skull defects are interpreted, especially the possibilities for shaping the free bone grafts in these regions. A clear topographic indication is described for the period of stabilization by bone plates; general significance is given to the possibility of plastic or osseous curing and to the harmonization of the anatomically more favourable parts and the individually peculiar features of every case. Plastic correction of facial asymmetries and functional restoration of intra-oral deviation were implemented in a group of 86 patients. This is explained by the results obtained.Q: Finding the length of an Archimedean spiral Given a point on an Archimedean spiral, find the length of the spiral, in terms of the radius.
