free download.Q: CakePHP rename  
and move Image only I'm building an  
image upload field like stackoverflow.

I'd like to keep the path where the  
image is saved, but I also want to be  
able to move the image later on. In  
other words: If I upload an image to  
/systems/images/img.png, I'd like to be  
able to download the image later, later  
on to /uploads/images/img.png instead.  
I imagine I'll need to create a new table  
to hold the new path, and the image  
itself. This is pretty much the reverse  
of what's already in CakePHP. How  
would I go about this? A: Extending  
the existing Images model might be a  
good place to start. Rename everything  
in the model to match your new path  
structure. `$this->name = 'images';`  
`$this->useTable = false; //... //`

Example for renaming your image\_file

---

column to filename //... \$model =  
\$this->Images->getModel();  
\$model->renameColumn('image\_file',  
'filename'); I'm not sure if there is a  
way to clean up the old path structure  
automatically, but you can always use a  
query in the rebuildAll() method to  
create a temporary array of old path  
strings from the model. This is a really  
rough example of how I would do it:  
\$query = \$this->Images->

## Download
