### What's New In?

Universal Media Manager (UMM) is an application for managing your digital media. It downloads content from web sites, uses the DLNA standard to stream content to your DLNA-compliant devices and allows you to add your own pictures, music, and video. Universal Media Manager allows you to select the content, play it, and optionally add it to your media library. The program does not include the ability to rip or convert your content in order to watch it on your computer - you need to own the media you want to add to your library in order to add it to UMM.
