Designing with AutoCAD You can use AutoCAD to create any of the standard 2D drafting functions, such as orthographic (2D), perspective, and oblique views. In addition, AutoCAD provides some unusual functions such as a technique to draw free-form on any surface, either natural or man-made, an ability to slice a 2D or 3D drawing into any 2D drawing element, a method to create 3D free-form drawings, and a process to export a 3D drawing to a 3D file. AutoCAD drawings are created in a dialog-based interface. In dialogs, you choose an option and then a series of input boxes appear where you enter text or numbers. You have a choice of which buttons to use. To exit the dialog, simply close the window and the drawing is saved. You can also save the drawing in a variety of file formats. When you click File, you see the Save As dialog where you can select a file format. The file name, description, and file size, as well as options for saving the file with certain modifications, appear on the right side of the dialog box. The Export dialog box allows you to export to other software, such as Adobe Illustrator, Microsoft Word, or Microsoft Excel. You can create a thumbnail for the drawing to help you remember it later. Creating a simple drawing with AutoCAD The simplest kind of drawing that can be created in AutoCAD is a line, or polyline. The drawing in the figure below was created in the drawing area using the Line command from the Home tab on the ribbon. The Line command creates a line on the current layer. After the Line command is executed, you can draw multiple lines. You can also apply the standard or nonstandard arrowheads to your line. Note: The Line command has been updated to provide a new choice to select the line color. See the Table below for more information on the Line command's new options. Creating a line in AutoCAD You can also draw a simple polyline. In the example below, a polyline was created by using the Line command from the Home tab on the ribbon. After the Line command is executed, you can draw a second line by holding down the Shift key while you press the Down Arrow key. Note: The Line command has been updated to provide a new choice to
