PremiereClipboard

===== CLI Interaction for Clipboard
Information, Copy & Paste. Do you
use pre-determined text? Are you
tired of messing with the menus and
having to search through them to find
what you need? Are you tired of the
Premiere "bug"? This simple app will
allow you to achieve so much more.
Type: 1. get your clipboard
information: C-_ pC: List All Items
C-_ cC: Copy Track C-_ rC: Load
Track C-_ tC: Load Track C-_ fC:
Paste Track (Optional): View
Clipboard List 2. (optional) save your

Track Item to a File: C-_ sT: Save Track as Title 3. (optional) View your Clipboard List: C-_ oL: View Clipboard List 4. (Optional) Save a Standalone Clipboard List to a File: C-_ sW: Save Clipboard List as.txt 5. (optional) Setup Custom Hotkey (Drop Text in KeyMacro, Hit key, paste what was dropped, Done) 6. (optional) Export Clipboard List for Use in Another Project: C-_ aW: Save Clipboard List as.csv The keymacro comes with a gazillion scripts. They can be used with almost all video software. For instance, I use my keymacro to quickly find the number of items in a playlist, find the exact video ID and make sure that a custom font is loaded.

================== Installation:

=============== 0. Download the keymacro archive. (the zip file) 1. Extract the archive. 2. Start the keymacro program - Edit the keymacro.txt (the text file) with whatever you want. - At the bottom you will see a comment. - Just change the number there. 3. Change key to the shortcut you want. If the original keymacro is not working, just copy the script that is located in a text file and paste it into the keymacro program. 4. Press c to load the script 5. Press t to open the script with the correct command 6. Press c to change the command 7. Press t to open the script 8. Press c to change the command 9. Press t to open the script 10. Press c 77a5ca646e

Author: Markus Frind Website: License: MIT License Apple's never-ending quest for copying another company's product design has got even worse, now that it has stolen AppleInsider reader Tom Saunders' iPhone 6. In a tweet, Saunders claimed that his new iPhone 6 had "a billion of design ideas," but that's where the similarity to Apple's design ends. While it has the same general look and feel of the iPhone 5s, there are a number of major differences. The most noticeable is the lack of a physical home button on the front of the phone, replaced by a screen that remains dark except when a user taps

on it. There's also no physical camera on the back of the phone, but instead, a small camera lens that appears when a user taps the screen. "Why would you spend so much time on making a phone look similar to Apple, except for the color it is? You can do better and there are many ways to make an Android phone look like any other model, which Apple did not do," Saunders wrote. The tweet included a screenshot of the phone, and when compared to an iPhone 5s, it's immediately apparent that Apple has taken a major redesign of its smartphone. Samsung's Galaxy S4 and HTC's One series look almost identical to their predecessors, but Apple's design is distinctive and instantly recognizable. Perhaps

Saunders has no intention of ever using the phone or it's a spare for the new Android-based iPhone he can never get a hold of. Either way, it's too bad Apple had to steal his design. Source: Ars Technica If you are a frequent user of Adobe Premiere Pro, you may have noticed that the interface has been updated in recent months. One of the coolest new additions is the ability to set your shortcuts by pressing on a specific tool bar in the timeline window. If you are not aware of it, you can go to Edit?Preferences?Keyboard Shortcuts to view all the shortcuts you can assign to the shortcuts on your keyboard. As you can see from the screenshot below, there are a lot of shortcuts listed. If you can remember

which one you use most often, you can assign it to a specific button on your keyboard. Here is a screenshot of the new interface: As you can see, the old interface looked very cluttered, but now, it is much cleaner

What's New in the?

Clipboard is one of the most used software program by every user. But now a new Clipboard Pro for Adobe Premiere Pro CC 2016. This is the most accurate and useful software to manage your Adobe Premiere Pro CC 2016 Clipboard. Features: *Automatically Sort Clipboard Items *Save All items to the file system *Automatically Load Items from the File System *Find All items in the
