EZ Looper is the Ultimate DJ Controller for your computer. You can use it as a MIDI Control Surface, DJ Controller or beat machine. Thanks to its modular design it allows multiple controllers and mixers to be controlled with the same app. With a Smart Design, EZ Looper will allow you to manage your DJ set, that is the easy part. EZ Looper offers lots of controls and features to enhance your live performances. You can Load, Save, Export and Import FX, Patterns, Sequences, Mixes and BPMs all in real time. You can also record your session in EZ Looper and playback it right after your show or use it as a reliable backup for your DJ sessions. This is the only app that can do it. You can organize your beats with tons of functions, like add effects like Compress, Reverse and Bounce. Have your own way to create loops, patterns or sequences. With EZ Looper, it is as easy as your DJ set! EZ Looper will also help you organize your music collection. Add music to a playlist, generate playlists with songs, filter songs and organize your Music library with hundreds of easy to use filters. You can play your songs right from the library, or organize them into playlists. You can easily record your live performances and upload your session directly to Soundcloud or DJshare with one click. EZ Looper will even convert your Live Session into an AutoDJ Session that you can upload directly to Soundcloud. All you need to do is to bring your laptop to your gig and play your song live. EZ Looper will do the rest and upload your session to Soundcloud, DJshare and Mixcloud with one click! It is the Best Digital Audio Player around. EZ Looper will optimize your Music Collection and the way you listen to it. With EZ Looper you will never forget a song, just press a button and EZ Looper will add it to your playlist. This way you can listen to your collection, your way and pick the songs that you really want to hear. With our top notch "Elvis Presley" Audio Engine EZ Looper will help you to enjoy your music collection like a King! Features: EZ Looper is a DJ Controller app built with modular design. You can control up to four MIDI controllers from the same app. EZ Looper can control up to four MIDI controllers. Just upload your drum kit and

EZ Looper is designed with minimalism in mind and as a live performance solution. It is not a DJ application and it is a plug-in for, at the moment, Ableton Live, Reason and Logic. Its feature set is always expanding to include support for the newest software but for now you should have a go with EZ Looper and see what it can do for you. EZ Looper Features: See above! EZ Looper Cost: There is no set cost to EZ Looper. The source code is completely open so all the information you need is contained in the source files. There is however some information on our website that is worth checking out. EZ Looper Support: Support for EZ Looper is always very active and we are always very happy to add support for other products or plug-ins. If you are interested in developing some support for EZ Looper contact us. EZ Looper Support (Add a comment): EZ Looper Support: Have used and it works well, fixes. Tested. Tested, works, tested. #1 custom VST in Ableton 10. All compatible and many more support. Very good, works, tested. #1 custom VST in Ableton 10. #1 custom VST in Reason and Logic, it works great. #2 custom VST in Ableton 10, no support, but good. . - LibreMan LibreMan Description: - LibreMan LibreMan is an attempt to produce an audio MIDI package that would have none of the ... more common problems with VST's; instability, undocumented functions, and everything else. It does this by implementing MIDI messages into the structure of your audio, and by using a MIDI sequencer to trigger these messages in the audio engine, and have the audio engine control the MIDI engine. It is stable, runs natively on Windows, Mac, and Linux and is 100% documented. LibreMan Design: LibreMan is comprised of a midi sequence that is used to trigger audio events. This midi sequence plays the note on a specific track, and each audio event plays a note on a different track. When triggered, these notes are placed into the audio engine, and the audio engine loops this audio until its length is reached. All parameters are defined in a configuration file,

What's New in the EZ Looper?

EZ Looper is an application build for dj's and live musicians, originally intended to control it with the MIDIMAN DM2 controller (still works). Its build in 100% pure C++. Give EZ Looper a try to see just how useful it can be for you!The Senate voted to kill the CISA proposal that was originally the basis for the Espionage Act of 1917. Today, the U.S. Senate voted to kill the CISA proposal that was originally the basis for the Espionage Act of 1917. The bill that would kill CISA was introduced by Senators Warner and Rubio as the Intelligence Modernization and Transparency Act of 2014. The bill in its current form, was voted down 31-67, after three hours of debate. It's a surprise to many Americans, but the bill was actually introduced as a compromise in 2013 and 2014. The bill basically combines two bills that were introduced in 2013, one from Rubio and one from Warner, and was actually bipartisan in its origin. The bills introduced by Rubio and Warner have been voted down before. The bill was a compromise that included a lot of amendments to the Warner-Rubio bill, and many of those amendments were voted on in a roll call vote today. The one amendment that was not voted on was in favor of killing the bill, but that amendment was filibustered by Senator Schumer. When it was proposed for a vote, Senator Wyden and Senator Whitehouse voted with Senator McConnell, to kill the amendment to kill the bill. Warner said he thinks CISA is dead today, even though he voted to kill the bill. He said, "I think this is dead. I will be very disappointed if it passes in its current form, and I will continue to fight it, but I think the fight is over." He added, "The bill was introduced as a compromise. It is dead. It's not dead because of a procedural vote on the Senate floor. It's dead because of the way the Senate went about doing it." The bill, in its current form, comes to the Senate floor for a vote after a secret hearing in which much of the public doesn't have any idea what has happened. The secret process is allowed in the Senate for some cases where there is classified information. But the Senate has not voted to allow the public to be privy to that information, something many people think they have a right to know, something many tech companies say they have a right to know. The CISA bill was made even more secretive and, as in the case of the PATRIOT Act, more expansive in its powers, when it was introduced as the Intelligence Community Management Act of 2012. The bill was used as a vehicle for the government to gain power over private companies that own

System Requirements:
