Field of the Invention This invention is a method of reducing noise due to the presence of x-ray absorbing deposits on the interior surfaces of the x-ray tube, and is particularly intended for use with a x-ray diffraction type of x-ray analysis apparatus. 2. Description of the Prior Art In the x-ray diffraction type of analysis for examining the internal structure of materials, radiation emitted from an x-ray tube passes through a monochromator to produce monochromatic radiation which is diffracted by a crystal to provide a diffraction pattern which is analyzed by a detector. The x-ray tube has a generally cylindrical shaped tube made of a heavy metal such as tungsten, and it may be used to produce a high-intensity, compact source of x-rays. However, a tube with such a shape is difficult to maintain in a clean condition because of the high temperature generated by the tube when it is operating, and the type of material which is used to produce the tube is expensive. Accordingly, the tube is normally kept cool in a specially designed cooling unit and the coolant which circulates through the unit is typically water. However, deposits of tungsten carbide may form on the interior surface of the tube due to the high temperature of the tube. Such deposits may be as small as a few microns in size, and thus

The spreadsheet has 9 columns, but only makes sense to think of it as having only 3 rows. There is a column for each type of "machine". They need to have this data re-ordered to match, but they need to be maintaining their native number column heading. For example: Machine1 | Machine 2 | Machine 3 Machine1_A | | | Machine2_B | | | Machine 3_C So the output I am looking for is: Machine1 | 82138339de
