Inhibition of mitochondrial DNA replication in plant cells by the induction of mitochondrial genome expression. We have identified nuclear DNA sequence (mat) homologous to mitochondrial DNAs (mtDNA) that induces mitochondrial genome expression. This nuclear sequence is present in plant cells and thus must be transferred from the nucleus to the mitochondria. However, in contrast to the moss Physcomitrella patens, maize mitochondria do not contain this sequence, and in tobacco plants, the induced mitochondrial genome expression is inhibited by 5-bromo-deoxyuridine (BrdU). Therefore, the induced mitochondrial genome expression is a non
