AutoCAD Editor The AutoCAD editor is available in a standalone tool called “AutoCAD” or in other AutoCAD related apps such as AutoCAD Map 3D, AutoCAD Web, AutoCAD Architectural, etc. The AutoCAD

---

Editor is used to create and edit drawings. It is available in three different modes – Drafting, Parametric Design and Documentation. There are different types of commands available in AutoCAD Editor, some are highlighted below.

**Drawing Commands –** These commands allow you to draw the desired shapes/objects on the image.

**Geometry commands –** This is used

---

to manipulate the objects on the drawing by modifying their shapes.

**Geometric constraints** – This is used to make the objects automatically arrange into the desired positions without drawing the shapes.

**Labeling commands** – This is used to add the labels to the objects on the drawing.

**Grouping commands** – This is used to group the objects into a single image.

AutoCAD 2010 is delivered in a single install package. It is licensed on a per-seat basis, and the number of licenses that can be used per user is limited, if the use is non-networked. Hardware AutoCAD 2010 can be installed on a system running Microsoft Windows XP, Windows Vista, Windows 7, Windows 8, Windows 10, Mac OS X, and Linux. It can be run on

---

systems with an installed and properly licensed version of the Microsoft Windows operating system. AutoCAD users who use AutoCAD LT or AutoCAD MPR can run a copy of the software as a stand-alone application using an application-specific license.

AutoCAD is available in a number of versions for different purposes. AutoCAD LT is a version for users of AutoCAD who only

---

need to create 2D drawings. For more complex 3D models and complex GIS information, AutoCAD Architect is used. Architect is used for engineering, construction, building information modeling (BIM) and land development. Architects will use 3D CAD for estimating, researching, working on BIM projects and creating detailed, precise designs. Autodesk 360 is the latest version of

---

the program and is available as part of AutoCAD. AutoCAD LT is a standalone version of the program. Architect is a standalone version and can be used as a stand-alone program or in conjunction with other software to create more detailed designs. Autodesk 360 is available on the Microsoft Azure cloud. License A license for AutoCAD is a privilege to use Autodesk's technology and tools for

---

certain activities. A license is also the permission to use AutoCAD (either a stand-alone application or as a plug-in) and all the "stored" content within AutoCAD. All versions of AutoCAD contain certain "stored" content, such as the drawing data and the graphics and user interface. The content within the AutoCAD program is considered licensed or a part of AutoCAD. The license is for both personal and

---

business use. It does not include a serial number for a version of AutoCAD or the right to redistribute a copy of AutoCAD. A license is different than a standard license. A standard license is often a product license for a 3D model or a program, such as a standard 3D rendering program. A standard license contains more information, which includes a number

Greater Arcana? As stated in my previous question, the "Greater Arcana" spell from Unearthed Arcana says that you may choose to multiply a spell by 1d4 (1) or 2d4 (2). My Question: what are the rules for what spells can be multiplied as an effect by a Greater Arcana? Is there an official list? For example: would I be able to multiply by 2 the following spells?
