folder [?] Works also from the Command Prompt DOSname Bugs, Bugs and Bugs! Some of the bugs are: [?] You should be able to create as many DOSnames as you want, if you had more than one you would see the possibility to rename them in the first drop down. [?] When using a fully qualified path, it should only return the short form of that path, it shouldn't return the long one. [?] If you select a filename, it should just return the short form of that filename, it shouldn't return any path. [?] You cannot select a directory in the Select Dir dropdown [?] If you press "Retry", it won't revert to "the selected file or directory", it'll just keep returning the same file/directory that it was on. [?] When creating new DOSnames, it sometimes does not save your changes. [?] It will sometimes return all the files/directories in the selected folder DOSname Screenshots: [?] DOSname main form [?] DOSname main form with browse buttons [?] DOSname main form with select file and select dir buttons [?] DOSname main form without browse buttons [?] DOSname main form without browse buttons [?] DOSname main form with browse buttons [?] DOSname main form with browse buttons and "Retry" button DOSname Changelog: v1.0.0 Initial release v1.0.1 Improved error handling v1.0.2 Fixed broken Retry button v1.0.3 Changed "retry" button text to "reset" v1.0.4 Changed "reset" button text to "Retry" v1.0.5 Changed "cancel" button text to "Exit"
