President Obama has said that, when the Navy SEALs came to the White House to tell him of the success of their mission, they first went to see his vice-president. He had to see him before he could do anything else, so that there could be no doubt about the authenticity of the deed. As Obama explained it to a supporter after the mission, “You don’t go in with heavy boots and machine guns and grenades and try to capture somebody in a building that’s been empty for a decade or more unless you have a pretty good idea who it is that you’re looking for.” So if this is true, why was there no effort made to talk to bin Laden or his family? Why not wait for his confession, as required by the conventions of war, and the strictures of Islamic law, before taking out a man who killed 3,000 people, not to mention the countless Americans he would have killed had he not been killed in the operation? The answer is that the suicide operation was an American operation and the whole point of it was to find and take out bin Laden. It was American policy to do so, for years. In 2008, according to the Washington Post, the government of then-president George W. Bush had already prepared the plans for a raid on bin Laden’s compound in the Pakistani town of Abbottabad. And American intelligence agencies were already tracking his family members. If that is so, then why did the Administration not take the risk of holding bin Laden for trial, instead of quietly killing him as soon as he was captured, or in an operation involving no risk at all? It is hard to imagine that Obama decided on the mission based on the possibility that he might capture bin Laden alive. Maybe some sort of deal was struck with the tribal

Your feedback is always appreciated!Q: Using the induction method, show that if  $n$  is an integer  $>1$  then  $1 + 1/2 + 1/3 + \dots + 1/n = 2/(n-1)$  Using the induction method, show that if  $n$  is an integer  $>1$  then  $1 + \frac{1}{2} + \frac{1}{3} + \dots + \frac{1}{n} = \frac{2}{n-1}$  I'm stuck in the proof, how would you solve this one? A: We will assume  $n > 2$ . Let  $f(x) = \sum_{k=1}^n \frac{1}{k}$

---

$1 + 2 + \dots + n = \frac{n(n+1)}{2}$  (i.e. the sum of the first  $n$  natural numbers) and we will check that  $f(n+1)$  is equal to  $\frac{2(n+1)}{2}$

$f(n+1) = \frac{1}{2}(n+1)(n+2) = \frac{1}{2}(n+1)n + \frac{1}{2}(n+1)(n+2) = \frac{n^2+3n+2}{2} = \frac{2n+2}{2} = n+1$  So the claim holds. A: You do induction, you prove the statement is true for a given  $n$  and you show that the statement is true for  $n+1$ . If

$$n=1 \text{ then } 2 = 1 + \frac{1}{2} = \frac{2}{2}$$

## RegexTransformer

It's an extremely powerful and useful tool for easy search & replace, however, it seems that it is able to do very little with a very high price tag. It's also a bit of a rough on my PC, especially when watching through a vnc session. It has been running for about 5 minutes and the CPU usage has been at about 0.95. I am a firm believer in using the free tools as a learning tool, but this program does not cut it for that purpose. I have written a few books on it, and my first thought is that the program needs to be rewritten from the ground up, by someone who knows what he or she is doing. Design: \* It's ok if the buttons are a bit clumsy, in fact they give you more flexibility, however, you need to move mouse cursor a bit to click a button. \* Filters are good, but they are a bit counter intuitive, when you do move mouse cursor the results change, don't do it if you are a beginner. \* Fixed text size, for text that is bigger than the frame. Simplicity: \* Ease of setup \* Explains regex at each step \* Explains the results of each step in the results window \* Results window is customizable \* All features easy to see and to use

RegexTranformer 5.0.1.4 by Antonio Chaves Antonio Chaves is a Free Software developer. He has a passion for software development. Description: RegexTranformer is a software program for performing search and replace operations on text. It allows you to easily search and replace text in multiple windows. There are a few other search and replace utilities available. Most of them will only allow you to search and replace within one window. Other tools allow you to search and replace in one window, but they don't offer the ability to do so in more than one window. RegexTranformer allows you to easily use a combination of windows for searching and replacing text. RegexTranformer has the following features

### What's New in the?

RegexTransformer is a multi-platform application that allows you to quickly perform text editing by means of regular expressions, or by means of any of the built-in regular expression sets provided with the application. In the last decade, the study of regular expressions has been a popular field of interest. These constructs are used to search and replace textual elements in documents and text files. They are essential for cutting-edge text processing tasks, such as information retrieval, text mining, electronic thesaurus generation, desktop publishing, and even for spam detection. In addition, the study of regular expressions has been an outstanding example of complexity and its relation to the human mind. RegexTransformer also includes a set of built-in regular expressions. It allows you to perform simple and efficient text modifications. It includes, for example, the substitution of whole words throughout the text, and the identification and replacement of single characters or line breaks. It also includes the identification of email addresses. The application also includes the possibility of combining the results of several regular expressions into a single text. This allows you to perform a basic sentence modification in a single operation. This program currently supports only English and Portuguese as the input languages. Key Features: - A set of regular expressions, in RET format. This means that the files are read and searched with simple text processing tools. - &n
