KeyMacro allows you to see what
characters a letter combination
represents. KeyMacro allows you to

see what characters a letter combination represents. To use KeyMacro: 1. Type the desired sequence in the text entry box. 2. Press the KeyMacro button and you will be presented with a list of all the key combinations that form the character. Tips: KeyMacro is an effective tool to remember the keys. For example, if you want to know how to spell the name Rebecca, you can simply type Rebecca into

KeyMacro and press ENTER. A list of the characters and their key combinations will be presented to you. If you don't want to display the list, you can press ESC or ENTER a number of times. There are three types of KeyMacro: 1. Displaying the KeyMacro, using the letter combination to the left of the KeyMacro button, will bring up a list of the key combination of the letter combination. 2. Displaying the

KeyMacro, using the letter combination to the right of the KeyMacro button, will bring up a list of the key combinations of the key combination. 3. Displaying the KeyMacro, using the key combination to the right of the KeyMacro button, will bring up a list of the letter combination. KeyMacro works only with non-space characters. A space character is typed like this: " " When viewing

KeyMacro for the first time, press the Spacebar to continue. If you want to see a list of the characters without KeyMacro, you can type " " into the search field. KeyMacro will not work if you are typing a word or phrase in the edit box, because then the edit box is active. Instead, you can use Find In Root Words or Find Roots With This Synonym buttons.

Interesting Searches KeyMacro allows you to see what characters a

letter combination represents. KeyMacro allows you to see what characters a letter combination represents. Use the keyboard to display the corresponding characters to the left of the KeyMacro button, for example, " " to " ": 3. Press the KeyMacro button and you will be presented with a list of all the key combinations that form the character. Use the keyboard to display the corresponding characters

to the right of the KeyMacro button,
for example, " " to " ":

WinThesaurus is a Windows application that allows you to find synonyms and other variations to your favorite words. It can be used to find the right synonym and to search for the best word to describe your ideas. WinThesaurus includes a list of all words found in the dictionary. This allows you to compare the different spelling of a

word to select the most appropriate. WinThesaurus offers the possibility of adding wild cards to find multiple roots and synonyms. As an example, you can use ? or * to find multiple roots with one entry. Wild cards can substitute for characters in the text entry box. With wild cards you can find multiple roots or synonyms with one entry. Find In Root Words and Phrases: WinThesaurus helps you find words and phrases using Find in

root words. It finds all words, words of any length, phrases, and hyphenated phrases. You can use the Find in root words button, the Find root words button, the Find root words button, or the Find root words button to find a word or phrase in the dictionary. You can then easily select the word or phrase you need. Find in root words provides a list of all roots, single words, and words of any length found in the dictionary.

You can also type the word you are looking for into the Find in root words box. The results appear as a list. You can select a word in the list by clicking on it, and then clicking on the words you wish to copy to the clipboard. Find in root words can be used as a quick way to find one or multiple words that you need. Find in root words will search your computer hard drive, but not on the Internet. It is also available in the

Tools menu. Find roots with this synonym: The Find roots with this synonym button is a quick way to find the root words used in a word or phrase. You can type a word or phrase into the box, and the list of roots that have the same stem as the word appears in the list. To type the word or phrase into the box, you must first click on the word or phrase you want to search. You will see the first root that has the same

stem as the word or phrase you are typing. To find the root of the word or phrase you are typing, click on the word or phrase you typed in the box. WinThesaurus will then highlight all the roots that

Q: Traversing an array inside a map Javascript I have a function that returns an object. The function is working properly. I'm having trouble traversing the object returned. I need to be able to traverse the object and grab values from the fields. Here is a sample: The function returns this: {

```
"friends_list": { "count": 1390,  
"friends": [ { "id": "123456",  
"name": "Tom" }, { "id": "123457",  
"name": "Dick" }, { "id": "123458",  
"name": "Harry" }, { "id": "123459",  
"name": "Mary" }, { "id": "123460",  
"name": "Charles" }, { "id":  
"123461", "name": "Paul" } ] }, My  
code: var myObject =  
friendsArray.reduce(function (map,  
obj) { return map.set(obj.id, obj); },  
new Map()); for(var key in
```

```
myObject) {  
  console.log(myObject[key]); } What  
I'm trying to do is this: var myObject  
= friendsArray.reduce(function  
(map, obj) { return map.set(obj.id,  
obj); }, new Map()); for(var key in  
myObject) {  
  console.log(myObject.friends.id); }  
The error that I'm getting is Can't  
find variable: friends A: You get  
friends in your myObject, but you  
do not return it to the reduce
```

function. You have to return the result of reduce as well, so you can use the resulting object in the for:

```
var friendsArray = [{ "id":  
"123456", "name": "Tom" }, { "id":  
"123457", "name": "Dick" }, { "id":  
"123458", "name": "Harry" }, { "id":  
"123459", "name": "Mary" }, { "id":  
"123460", "name": "Charles" }, {  
"id": "1234
```

System Requirements For WinThesaurus:

Minimum: OS: Windows Vista,
Windows 7, Windows 8, Windows
8.1 (64-bit) Processor: Intel Core i5
3.0 GHz or AMD Phenom II X3 720
Memory: 4 GB Graphics: GPU with
1GB VRAM Storage: 1 GB available
space Additional Notes: Instructions:
Note: If you encounter an error
message stating that the "Installer
could not be located", please

download the "Setup.exe" file again.
