The latest version of Hydrogen has become a real drum machine! This is a drum machine, where you create drumkits, and arrange them in a pattern, and play it with any number of tracks, making beats, tracks, and fills. Using a powerful drum kit feature, you can also use a special beat sequencer, which lets you arrange beats for

---

a track with the beat counter, arranging 8 bars for each beat, which can be customized. You can easily mix in free time, by adjusting the beat with the slider. Then you can play the beat at the interval of 1 bar for each beat, and loop the beat back to the starting point. When you start and play the beat in a track, the beat appears on the screen. Using the beat sequencer, you can arrange the beat, and adjust the sound of each drum kit by moving the beat counters. Adjust the beat counters to the beat that you want to use, and it is reflected on the beat. If you stop playing and move to a different part of the beat, the beat changes according to your movement. Even if you play in the middle of the beat, the beat changes. If you continue playing, you can adjust the beat, and the drum kit starts from the beat you set as the next beat. When you select and

---

play a drum kit, you can create a song using any number of drums, including the bass drum, snare, cymbals, and more. The track you play on can be a drum kit or a track. If you play the drums, you can use up to four tracks, including a main track and three tracks for the drum kit. Creating a drum kit is really easy. Drag the drum kit into the track, and arrange the drum kit by changing the beat interval. As you play the drum kit, the number of tracks shows up on the screen, so you can easily check the track you want to play by pressing down the number. You can create your own drums for the kit by entering a folder containing drum kit software. You can import files such as snares, cymbals, and more. When you play the drum kit, a record shows up on the screen. You can adjust the sound of each drum kit with the mixer, including the volume, effect, and even EQ. You can even

---

add a guitar or synth bass to the kit. You can add effects to the drum kit, including delay, chorus
