Schedule recordings and playbacks, record multiple channels at once and monitor and adjust the volume level for each of them. Test for the best settings before recording. Integrated audio file editor. Reviews of iRecordMax Sound Recorder - Great Audio recording and burning

applications, but developer should upgrade the version. - I have been using this iRecorder for many years. It has always worked great. But on Windows 10, I tried to load it up, and it has been playing since I loaded it, but it does not record anything at all. It keeps spouting information about the MP3 encoding format I have set as the default. It does not allow me to change it to another encoding format. - I have used the recorder for many years and it works great. Now, it doesn't. I was able to finally find that it works only for some files, but not others. I couldn't figure out what I changed in order to make it stop working, and after several hours of research, I gave up. So I'd try again if I had a clue where to start looking. - Sound Recorder is a very good recording app and it works well. My problem is the WAV-encoding audio files. I have set the WAV-encode as default, but it won't allow me to change it. It automatically changes to MP3 after I try and save it as WAV. I can record anything else, so the WAV-encoding doesn't seem to have any problem with anything else. It has worked before, and worked well for a very long time. - I've used iRecorderMax for years. I was not aware that it only supported certain file formats. I simply upgraded from 7.1.9 to 7.1.19 thinking that would work. Unluckily, it didn't. I don't know which file formats it supports. It is a useful recording app though. I've had nothing but problems with this recording software

System Requirements:

Mac OS X (10.6.6+) 512 MB RAM 2 GB available disk space NVIDIA GeForce 8600 / ATI Radeon X1600 or equivalent video card Keyboard & mouse (Mac Only) SVN version of SDK and Xcode.
