scripting AutoCAD is an X-language/API-enabled product from Autodesk. X is an XML-based scripting language that is used for automation and configuration of software, with the ability to directly write code in the native AutoCAD language. The ability to write code is also available for AutoCAD's predecessor, AutoLISP. X-based software is able to interact with AutoCAD through the X-API. This allows the installation and modification of add-on modules to a CAD program, and the creation of specialized macros in AutoCAD. The scripting language is somewhat similar to the Macros programming language available in Microsoft Office. Accessing the API in AutoCAD, X-based software, and Autodesk Exchange software requires a license, but Autodesk offers a service to allow remote access to AutoCAD on a daily or weekly basis through a dedicated team of technical support staff who will help users address issues, resolve problems, or customize AutoCAD. To use X, a 3-D or 2-D drawing must be loaded into a CAD program. X has the ability to navigate a drawing in three dimensions and it can directly access and manipulate its contents. Autodesk Exchange software Autodesk Exchange software, available for download from the Autodesk Exchange site, gives users the ability to download AutoCAD plugins and add-ons for various purposes and purposes. Autodesk Exchange software allows you to download plugins as applications, which can be run as standalone applications and integrated into the main program. There are currently over

CAD industry standard The term CAD (computer-aided design) is generally used to describe the software tools, techniques and workflows that are used in the design of an object. This term has two definitions, the first being a generic term that applies to any electronic design data format used to create a 3D model of an object or any medium with 2D geometry, that is, lines and geometric shapes. This definition is used in international standards, such as: IEC 60950, ISO 14649, DIN P2144 and DIN P4127. CAD can also refer to the specific set of workflows and software tools used in the creation of such a model, including parametric modeling, code generation, construction document generation, and the management of product design data.
