### What's New In?

ExtremeCopy Portable is a freeware tool developed to help users copy files much faster than with the standard Windows utility. In addition, the application also provides some extra features, as well as a very user-friendly interface with plenty of details regarding the copying process. The main window of the app is rather simple and requires users to configure the source file or folder and the destination directory. You can do this either via the built-in buttons or simply by dragging the target files or folders over the program's GUI. Once you start the copying job, ExtremeCopy Portable keeps users up to date with the overall progress of the task thanks to information such as speed, elapsed and remaining time, status and currently copied file.

Additionally, the program allows its users to pause and resume the task at any given moment, but also skip the current file and proceed with the next item. A configuration screen is also available, holding options such as copy data buffer size, maximum failed files in list, verify data after the task comes to an end and play a sound when all files are copied. Another thing that's worth mentioning is that ExtremeCopy Portable is fully portable, which means that users don't even need to install it. It's enough to simply copy all its files to a removable drive in order to use it on the go without prior installation. As a conclusion, ExtremeCopy Portable is indeed a faster copying tool as compared to the built-in Windows tool and thanks to its user-friendly approach, both rookies and those more experienced can use it just fine. -- User Review ExtremeCopy Portable is a freeware tool developed to help users copy files much faster than with the standard Windows utility.
