What is the best approach for picking the sequence? One approach is to pick numbers from a known distribution, e.g. normal distribution (mean and variance) Another is to pick a sequence by using your own secret algorithm, e.g. pick a number at a time, remove from a sequence of numbers, repeat until the sequence is complete. What is the better approach (if either of them)? A: I would say use a counter. If you need random numbers, check out Q: Jmeter parameters capture in Google Analytics I want to capture the http parameters, such as: and use it as variables in the same request (ex: ${__V(email)}). How can I set this up? A: Assuming that you have a pre-defined JMeter Test Plan and before GATE script of the same plan, you should go to View Results Tree and select Results View Tab to see how Jmeter performs on the test plan. There you will see your requests, responses, and captured parameters. In order to copy these values into JMeter test plan, you have to use Beanshell PreProcessor, see Beanshell PreProcessor Reference Guide For every function you want to be executed before each sampler - beanshell would be a good place to start. Q: JS interaction with a hidden input field Can JS intercept keydown event of a hidden input field? I have some inputs and users can set d0c515b9f4
