Like any learning-curve of a computer program, you will learn it quickly. Don't forget to take a break now and then. Making basic edits After you have downloaded and installed Photoshop Elements, open the program and navigate to the Cuts⇒Create⇒Create Layer Mask submenu (as shown in Figure 8-4) to create a new document. After the document is created, you can find the layer that's currently active. In Figure 8-4, the active layer appears at the bottom center of the Canvas with a black border. The Layer Mask is controlled by the active layer only. If you click elsewhere in the canvas, the Mask won't be active. Figure 8-4: You can only make changes on the active layer. The next step is to open the Layers panel and, on the right side, click the New Layers icon. A new, empty layer appears, as shown in Figure 8-5. The dialog box of the New Layers dialog box disappears, and a button with the plus (+) sign is enabled on the new layer. The layer buttons appear on the bottom of the Layers panel. Layers that are not active are outlined with red. Figure 8-5: Click the plus icon (+) to make a new layer. To use the new layer, just make any changes you need to on the layer, and when you're done, simply click the New Layers icon again to close the dialog box. To delete a layer, just click anywhere on the layer and press the Delete key on your keyboard. Photoshop now has a new layer to work with. You can either add another layer by using the Layers panel and clicking the New Layer button, or create a new layer in a new document. The layer buttons (a cross and plus sign) appear on the bottom of the Layers panel. The active layer is labeled with the plus sign. Photoshop has three layers by default: a Background layer, a foreground layer, and the layer that you're working on. To add a new layer, press Ctrl+N (Windows) or Command+N (Mac OS) on the image to display the New Layer dialog box, as shown in Figure 8-6.
