ScanRouter EX Professional

ScanRouter EX Professional is an MFP-to-MFP document distribution server used to deliver documents from MFPs to preprogrammed destinations. Users scan documents from an MFP scanner and select destinations such as email addresses or shared network folders, via the MFP operation panel. Up to 16 MFPs can be used with a ScanRouter EX Professional server and up to 2000 destinations can be registered. Access to the ScanRouter EX Professional server can be restricted using Windows, LDAP, or Novell authentication. Give ScanRouter EX Professional a try to fully assess its capabilities! ScanRouter EX Professional Description: Knowledgebase ScanRouter EX Professional ScanRouter EX Professional is a document distribution server used to deliver documents from MFP scanners to preprogrammed destinations. Users scan documents from an MFP scanner and select destinations such as email addresses or shared network folders, via the MFP operation panel. Up to 16 MFPs can be used with a ScanRouter EX Professional server and up to 2000 destinations can be registered. Access to the ScanRouter EX Professional server can be restricted using Windows, LDAP, or Novell authentication. Give ScanRouter EX Professional a try to fully assess its capabilities! In scanning the document, the user can specify the destination to which the document is to be sent. Enter the destination name, which can have up to 20 characters, in the Destination field on the ScanRouter EX Professional ScanRouter Operation Panel (SPCOP) and press the Enter key. If the destination name contains a space character, enclose the name in quotation marks " or enclose the destination name in back quotes " to generate the name correctly. A user can manage the destinations that are to be shared with other people by opening the Shared Places Settings from the Options menu and setting the destination details there. If the destination name is empty, the operation cannot be performed. In this case, the destination name is added to the destination list, and can be assigned to the user. If the destination already exists, that is, there is already a similar destination in the Shared Places Settings, a new destination will not be created. The destination will be added to the destination list on the next scan. Display When SPCOP Shows Scan Routing Operation: The ScanRouter EX Professional will display the routing operation when the scanning operation is completed. If

What's New in the?

+ Has some 30 preinstalled document templates (category themes) + New theme templates can be installed on demand + Advanced document distribution + Converts PDF documents to multi-page TIFF documents + Can distribute documents encrypted or signed with AES + Can provide several options for encryption and signing + Can provide password help for MFP scanners when creating reports + Offers better protection against document printing on untrusted printers + Supports a range of third-party communication protocols for integration with other applications + Features powerful image processing to convert images to other formats + Responsible encryption of data for document delivery + Can be deployed as a Windows service ScanRouter EX Professional is a document distribution server used to deliver documents from MFP scanners to preprogrammed destinations. Users scan documents from an MFP scanner and select destinations such as email addresses or shared network folders, via the MFP operation panel. Up to 16 MFPs can be used with a ScanRouter EX Professional server and up to 2000 destinations can be registered. Access to the ScanRouter EX Professional server can be restricted using Windows, LDAP, or Novell authentication. The MDM product for one of the largest telcos in the country uses this single source for all of its messaging gateway appliances and native mobile clients. Not surprisingly, it's a great product for managing the many Internet-facing devices in the organization. MDM controls access to both applications and the web, and it's built on top of many of the same technologies and infrastructure. One of the attractive features is the support for native mobile clients, of which there are a variety of types. The cloud-based MDM product is valuable for large organizations with a varied set of devices and for mobile devices that need to connect to the corporate network. MDM provides a standard way

of deploying, distributing, and managing mobile applications and web services. This approach has been embraced by enterprises with a range of devices. The MDM product for one of the largest telcos in the country uses this single source for all of its messaging gateway appliances and native mobile clients. Not surprisingly, it's a great product for managing the many Internet-facing devices in the organization.
