[Fibrous dysplasia of bone: a clinicopathological analysis of five cases]. To explore the characteristics of fibrous dysplasia of bone. Five cases of fibrous dysplasia were analysed. The ages of the patients were from 4 to 36 years. All patients were treated with different methods. Including one patient with penopolar fibrous dysplasia treated by enucleation. Histopathological and immunohistochemical study were used to analyse the pathological findings and its relationship with the localization and the pathogenesis of fibrous dysplasia of bone. The expression of alpha-smooth muscle actin (alpha-SMA) and podoplanin were detected with immunohistochemical study. Fibrous dysplasia located in long bone, bone cortex and metaphysis in all five cases. Two cases were complicated by pathological fracture. Histopathologically, the tumours consisted of fine, long, bland spindle cells. They were arranged in intersecting fascicles, haphazardly or in a storiform pattern. The spindle cells showed lack of cytological atypia, no mitosis and no osteoid production. Immunohistochemically, the spindle cells were positive for vimentin and alpha-SMA. The spindle cells were negative for CD34, CD18 and lysozyme. The alpha-SMA positivity is proved to be of value in the diagnosis of fibrous dysplasia of bone. Fibrous dysplasia of bone is a group of non-neoplastic bone tumours of mesenchymal origin. The lesion occurs mostly in children and young adults. It is a benign lesion with unpredictable clinical behavior.

Q: Cleaning up some code that extends Activity I have made the following class that extends Activity:

```
import java.io.File; import java.util.Scanner; import android.os.Bundle; import android.util.Log; public class FormatConverter extends Activity{ @Override protected void onCreate(Bundle savedInstanceState) { // TODO Auto-generated method stub super.onCreate(savedInstanceState); setContentView(R.layout.formatconverter); /**
```

What's New in the Photoshop?

Create a Graphic and Type Placement Map Create a Graphic and Type Placement Map A graphic and type placement map is a very powerful tool that allows you to place graphic elements or text such as text boxes in a scene as if you were a painter. You can create graphics and text layers and then choose where to place them on the canvas.

Place a Linked Layer Place a Linked Layer A linked layer allows you to combine two or more layers together. Layers are like pages in a book. You can have different layers for different things, like text and graphics, all on the same Photoshop document. When you place different layers next to each other, you can link them together so that when you change the graphics or text in one layer, it changes the other layers as well.

Create a Gradient Map Create a Gradient Map Create a gradient map will be the most commonly used tools for working with Photoshop. You can create a gradient map with a variety of options.

Create a Radial Gradient Map Create a Radial Gradient Map Create a radial gradient map with an even color palette. You can apply a radial gradient map to any standard Photoshop layer, text, or a group of layers. This effect is best for creating web graphics and logos.

Adjust the Opacity of a Layer Adjust the Opacity of a Layer Adjust the opacity is a setting you use to control how much light or darkness is visible on a layer. Layers typically have a single opacity setting. Layers are like pages in a book. You can have different layers for different things, like text and graphics, all on the same Photoshop document. When you place different layers next to each other, you can link them together so that when you change the graphics or text in one layer, it changes the other layers as well.

Create a Photo Filter Create a Photo Filter Create a photo filter allows you to tweak the look of an image with a range of different effects. When you apply a photo filter to an image, you can make it look like it was taken in the past, the future, a polaroid, or under a red light.

Rotation tools rotate the image by 10°, 25°, or 90°.

Refine Edge allows you to sharpen the edges of an image.

Color Correction allows you to adjust the color or tone
