MiniPie is a desktop application for Spotify users. It is a small music player that allows you to control playback without having to open the main Spotify window. Traditional pneumatic gun powder firearms utilize a tubular magazine containing several powder cartridges. One cartridge is loaded into the firearm, and when a user pulls the trigger, the firearm is actuated and the charge of powder and ball are simultaneously and rapidly propelled out of the firearm. These firearms are widely used in military and law enforcement applications. However, they have significant disadvantages due to the tube-like shape of the magazine. For instance, these firearms are known to jam or misfire when a round of ammunition is not completely depleted. The problem occurs because an empty cartridge (i.e., a fired cartridge which has been expended) is "stacked" on top of a partially expended cartridge in the magazine. In such a scenario, the firing of the firearm with the first cartridge in the magazine will be most likely to also fire the second cartridge in the magazine. However, the force of the firing action will only drive the first round out of the magazine, and then the second round will not be ejected because both are "stacked" together in a row. As a result, the two rounds may become lodged in the magazine, or otherwise misfire. This is extremely dangerous, particularly in law enforcement applications where individuals could be endangered by the incapacitation of multiple rounds in a single magazine. In addition, ammunition magazines such as tubular magazines must be manufactured with extremely close tolerances because of the high pressures involved. This is costly and increases the manufacturing time and complexity of these magazines. Also, tubular magazines are generally limited to twenty-round capacity and are difficult to reload. This limits the effectiveness of users of such firearms. In an attempt to overcome the above disadvantages, ram-in magazine type firearms have been developed. Such firearms utilize a feed ramp to feed rounds of ammunition into the gun, and then rely on a spring to push a round of ammunition down a barrel of the gun. This type of magazine is commonly used in many airsoft pistols as well as in more modern firearms such as the AR-15 and M-14. U.S. Pat. No. 7,281,589 to Glaser et al. discloses a hand-held firearm with a magazine having a tapered tubular magazine receiver. The firearm includes a spring loaded firing pin to actuate the firing mechanism of the firearm. The magazine includes a feed ramp for b7e8df5c8

Get MiniPie I've always been a bit of a control freak. I like things neat and organized, and I like to have things done quickly and efficiently. However, at times, it's so easy to get caught up in putting up all the things I need to do in order to accomplish a particular task that by the time I realize it, I've got hours upon hours of free time on my hands. That's why I started making to-do lists. I found that most people were using the same basic lists, which was useful, but I wanted to be more specific than that. I wanted to know: I wanted to dig a little bit deeper. So I started collecting all of the lists I was seeing others use, in an effort to create my own list that I could use for my own purposes. There are a lot of different types of to-do lists, and some are better than others depending on what you need them for. Today I'm going to cover the three most common types of to-do lists: Personal: The lists we make for ourselves are the most personal lists. We make them for our own purposes, and since each person is different,
