The utility of such articles has been primarily for the purpose of simple demonstration or decoration in the form of a temporary tattoo. A need exists for a waterproof, breathable, inexpensive, non toxic, flexible and transparent synthetic skin which is suitable for a multitude of uses. The present invention provides such articles which are suitable for use in such applications. In addition to providing such articles, it has been surprisingly discovered that the articles can be used with benefit in the repair of damaged

skin, particularly burn wounds. It has also been surprisingly discovered that burn wounds covered with such articles heal significantly faster than wounds not covered with such articles. Accordingly, it is an object of the present invention to provide a method of covering burn wounds with a synthetic skin article which would serve as a therapeutic aid. It is an object of the present invention to provide a synthetic skin having a thin transparent film on one surface thereof and having continuous mylar film on the opposite surface thereof to serve as an outside layer of protection from the environment. It is another object of the present invention to provide a synthetic skin having a thin transparent film on one surface thereof and having a thin film of a plasticized polyvinyl chloride on the opposite surface thereof. These and other objects of the present
