Download Sniff 720p movies for free and watch Sniff online movies .Q: How to call a method passing a custom Class[] param in Java I tried looking for an answer to this question but I couldn't find a satisfactory one for my particular situation. Basically I have a custom class called "ObjectSet" which implements a List and I need to create a method to do this: public List set(Class type, Object[] objects) But as you can see, I am not sure how to implement the T part of it in the method signature. I have tried changing my custom class to an Abstract
