President Donald Trump on Friday signed an executive order that authorized the stiff new taxes on up to \$50 billion in Chinese goods as early as this week. China quickly reacted, threatening to impose its own tariffs on U.S. goods in response, which could set off a chain reaction that would hit other U.S. allies. 1. Field of the Invention The present invention generally relates to a method of preparing a water soluble alkylarylpolysiloxane having an aryl group at the polymer chain terminal. 2. Description of the Related Art As a method of solubilizing alkylarylpolysiloxanes, the addition of a trialkoxybenzenesulphonate to a mixture of an alkylarylpolysiloxane and a polyalkylene oxide is known (Japanese Laid-Open Patent Publication No. HEI 7-212468). It is also known that the addition of a trialkoxybenzenesulphonate to a mixture of an alkylarylpolysiloxane and an arylpolyorganosiloxane yields an arylmethylpolysiloxane. Examples of such arylmethylpolysiloxanes include a mixture of diphenylsilane and polymethylphenylsiloxane and a mixture of diphenylsilane and methylphenylpolysiloxane (Japanese Laid-Open Patent Publication No. HEI 11-125833). However, the alkylarylpolysiloxanes used in the methods described above have a problem in that the yield of the desired products is low when the desired product is obtained from the mixture through distillation. Furthermore, the methods above have a problem in that the glass transition temperature of the resulting products is low, which makes it difficult to use the products at high temperatures.
