this difference. Conclusion ===== We have studied the effect of loop-hole pairing on finite systems at half filling and two-fold filling, and its relationship with the magnetism and the quantum phase transition. Despite the use of a local model (the spin-wave theory) we have been able to reproduce a few important features of the phase diagram found from realistic studies, including the associated quantum critical point. We have found that the effect of  $V$  changes the qualitative behavior of the  $U$ - $J$  phase diagram. The  $U$ - $J$  phase diagram at two-fold filling becomes similar to the one at half filling if  $V \gtrsim 1.8J$ , and a new, hole-hole  $(U,J)$ -rich, antiferromagnetic phase emerges. We would like to thank F. Feher, D. Lacroix, and H. Tsunetsugu for useful discussions, and J. Sagi and A.J. Berlinsky for their help in the calculation of the model on a finite lattice. Systematic review and meta-analysis of the effects of anti-tuberculosis treatment on the risk of hepatotoxicity, cholestatic jaundice, and steatohepatitis. Tuberculosis (TB) is an important cause of morbidity and mortality throughout the world. In this review, we compare the incidence of hepatotoxicity, cholestatic jaundice, and steatohepatitis in TB patients who received different drug regimens. A systematic search of Medline, EMBASE, and CINAHL up to April 2012 was performed and studies that examined these outcomes were included. The relative risk (RR) for each outcome was pooled by random-effects models. The data were analyzed for all patients, and then separately by age, in patients treated with anti-tuberculosis drugs, and in patients co-infected with human immunodeficiency virus (HIV). There was a significant increased risk for hepatotoxicity in patients treated with isoniazid-containing drugs (RR 1.58, 95% CI: 1.16-2.16) and for cholestatic jaundice among patients treated with isoniazid, rifampin, and pyrazinamide (RR 1.92, 95% CI: 1.32-2.81). The risk of steatohepatitis was only marginally elevated (RR 1.40, 95% CI: 0.94-2.06). The risk of hepatotoxicity and cholestatic jaundice was increased in patients treated with isoniazid-containing drugs. The effect of isoniazid on hepatotoxicity was consistent regardless of presence or absence of HIV coinfection and age, but it was more pronounced among young patients. Physicians should closely monitor patients during treatment with anti-tuberculosis drugs, and ensure that isoniazid is used as second-line agent for treating latent TB infection. Brief Description: The Egyptian government has accused Google of violating its trademark of the term "Egypt" by adopting it into its business activity, and promised to take legal action in response. In a statement posted on its official Facebook page, the Egyptian Interior Ministry said that Google Egypt was violating the Egyptian trademark law and has no right to use the term, a reference to the Arabic word for Egypt, 'Egypt.' It also accused the company of trying to "intentionally cover up the Egyptian uprising which
