## What's New In SmarterMail Log Analyzer?

SmarterMail Log Analyzer allows you to view the information written to the SMARTEMail log file. It is a small utility that allows you to review the information written to a log file in the Windows directory. Read the log file and display it, as well as specify a list of events that you are interested in. Select the details of the interface that will display the IP addresses. Multi-language interface. SmarterMail Log Analyzer Key Features: All the information stored in the logs is displayed in a tree-structure. In addition to displaying the currently open log file, you can also open another log file on the tree-structure. Features to the right of the tree-structure display the information about the selected event: - the date and time of the event; - the file name of the file where the event was recorded; - the size of the file (and consequently, the number of characters written in the log) to which the event corresponds. These features can be useful to all segments of the SmarterMail Log Analyzer use. The application allows you to specify a particular event type. You can set the list of events that you want to be displayed (when you select it from the list on the right of the interface, the other events are switched off). Other settings. You can also configure the size of the interface, its color scheme and font, date and time format, and so on. Programming allows you to specify the log file path. This allows you to show the log without having to switch the file. To switch the window of the log to a new file, press F5. Programming allows you to specify a list of IP addresses for the tree-structure interface. This feature makes it possible to print the information written to other addresses than the standard SMARTEMail address. Sample log file path in a Config file: IP="log.log" OR IP="/home/user/SMARTEMail/log.log" Programming allows you to open the selected log file on the tree-structure interface with a click on the specified IP address. This feature makes it possible to take a look at the log in the context of the SmarterMail application. SmartMail Log Analyzer adds in Windows Explorer context menu for SMARTEMail log files. You can easily browse the
