Today, the most commonly used version of Photoshop is Photoshop CS5 (2013), which is just about equal to Photoshop CS4. CS5 is also the version that enables you to work with both Windows and OS X. Photoshop CS6 and CS7 are also available for users with new computers. You can also purchase upgrades to newer versions. If you're a CS5 user, you can work with older versions like CS3, CS4, and CS5 as long as you're using a computer that has the original application installed. All newer versions have a slightly different interface that takes some getting used to if you're used to the old toolbars. If you decide to upgrade, be sure to take the time to become familiar with the new interface before you design images. Knowing a few terms Photoshop's toolbox has its own vocabulary that makes using it as easy as possible. "Controls" are the little things that do a thing — so the picture controls change the image, and so on. "Layers" are the pieces of the image on each layer that make up the picture. "Channels" are little pieces of transparency that make a piece of an image transparent or opaque. Here are some terms to help you with your Photoshop adventures: Selector: A lens-shaped tool that allows you to select an area to operate on. For example, select the area inside the red box in Figure 1-1. *Figure 1-1:* Use the Selector tool to select a specific area and the Direct Selection tool to modify it. Direct Selection: The leftmost tool on the toolbar. The shape of the tool has a diamond with two lines radiating from it. This tool is used to select an area of an image and modify it directly. For example, select the area inside the red box in Figure 1-2. Magic Wand: The rightmost tool. It works in a similar way to the Selector tool but is more selective. Use the Magic Wand tool to select an area from the image and then modify it on the fly. For example, select the area inside the red box in Figure 1-2. *Figure 1-2:* Use the Magic Wand tool to select a specific area of an image. Always remember that you can select multiple areas — be sure to click on an area before you click on the Magic Wand tool. The Magic Wand tool is particularly useful when you want to select

Q: Code Igniter: language first then back end? Let say I have base language like english for all. Now I want to change it for some clients. Let say 2 clients. So I want to change some of the content for those clients. So I will have language on both of the clients from the first one? Or I will have the same code for all of the clients? A: It would depend on how you implement the change. In the second case you can make a new controller and model for the second client, and copy the base model and controller and change them accordingly. If you go this route you need to make sure that the user has the proper rights to view your templates if the data is going to be similar. In the first case I would not make a new controller or model for the second client. I would simply store a second language in the users table. Users table will only contain their username, and language_id. The language_id is used to refer to which language you are working with. That way if there is a need to implement translations for that user (or another user) you won't need to change anything. { "timeAgents": [{ "baseScore": { "base": 1 }, "humanLevels": [{ "value": 0.1 }]] } }According to the latest numbers released by the Statistics Denmark in March 2019, Denmark has 16.5% of the world's population, but it hosts the absolute most number of homeless individuals. 1.2 million people live on the street or in emergency accommodation, making Denmark not only the most homeless nation in Europe, but in the whole world. This was the case in the past, and
