## Android Control

Android Control is an intuitive and efficient software solution whose main function is to provide you with the possibility of controlling your Android-running device, through USB debugging. The program is very easy to install, requiring no special knowledge in working with computer or with similar tools. Afterward, you can launch the application and start performing the changes that you want in your Android device, using USB debug mode. Evidently, this will need for the phone to be connected to your computer through a USB cable, but you first need to activate the feature from your device's 'Settings' section. USB debug mode, which on some devices is also called 'Developer Mode', offers you an increased level of access into the contents of your phone, permitting you to make certain changes that would otherwise be unavailable or difficult to achieve. Android Control features a fairly basic and unimpressive interface, displaying several buttons that are assigned to various actions you can perform on your phone or tablet. As such, you have the ability to 'Reboot Device', 'Reboot Device In Recovery Mode' or 'Reboot Device in Bootloader Mode'. At the same time, the tool enables you to 'Remount System Partitions' or 'Shutdown Device'. Moreover, Android Control allows you to 'Install App into Device' by selecting the corresponding APK file from your computer and loading it into the phone. The opposite operation can also be performed, meaning you can 'Uninstall App from Device' by inputting the package name and pressing on the 'Uninstall' button, saving you significant amounts of time and effort in the process. To summarize, Android Control is a useful and handy utility that can assist you in managing your Android running phone or tablet, enabling you to control what apps to install or uninstall on it, from in front of your computer. V-Link is the most popular and largest groups of apps and internet. The company is known as a top-level telecom company and a leading internet service provider in the world. V-Link has been using the most effective way to introduce its services to customers. When you're using V-Link services, you are given the chance to enjoy an array of advantages in an easy to use package. This way, you can have the best services at a minimal price. V-Link is a leading and fastest growing mobile service company. The service is supported with advanced mobile technology and modern telecom technology to improve services. V-Link Customer Care Services always called to help for any kind of problem with

## What's New in the?

+ Uninstall App from Device: Unlock your device, press the 'Application Uninstall' button to uninstall any applications from your device. + Reboot Device: Reboot your device into recovery mode. + Reboot Device In Recovery Mode: Reboot your device into recovery mode and reboot it back into the original Android OS. + Shutdown Device: Turn off the device. + Remount System Partitions: Remount the system partition into read only to prevent accidental changes to your device's data.
