TTF to PCX Converter is a tiny application capable of creating PCX files from TTF TrueType fonts, as the name says. It's equipped with intuitive options that can be easily used. The downloaded package also includes the source code. No installation required Since there is no setup pack involved, you can save the files in any part of the hard disk and double-click the.exe to launch TTF to PCX Converter. Another possibility is to keep it stored on a USB flash drive, in order to directly run the tool on any computer with minimum effort and no previous installers. More importantly, it doesn't add new entries to the Windows registry or create extra files on the disk, leaving no traces behind after removal. Monochrome or anti-aliasing font conversion As far as the interface goes, the utility adopts a standard window similar to the classical font formatting configuration panel, where you can browse a list with all installed TrueType fonts and select the one you wish to convert. It's possible to change the font style and size, as well as to preview a sample with the font. Furthermore, you can pick monochrome PCX mode or enable anti-aliasing, enter the minimum and maximum characters, as well as establish the minimum and maximum color (for anti-aliasing mode only). The new PCX file can be quickly created by just indicating a saving directory and file name. There are no other notable options available here. Evaluation and conclusion We haven't encountered any unpleasant issues in our tests as far as stability is concerned, thanks to the fact that the tool didn't freeze, crash or prompt error messages. It didn't hog system performance, using low CPU and RAM. Although it hasn't been updated for a long while, TTF to PCX Converter still works on newer OS editions. Two possible roles of diltiazem in patients with variant angina. Of 18 patients with variant angina (VA) and coronary artery spasm who were found to have reversible myocardial ischemia on thallium-201 scintigraphy, the pathophysiology of VA was elucidated in 15. Fourteen had had previous myocardial infarction (MI), 2 of whom had coronary artery bypass graft surgery. Among these 15 patients, non-ischemic variants were initially suspected in 5 (33%), and only later did symptoms develop. By pacing stimulation before and after diltiazem, the culprit coronary artery was identified to be the right coronary artery (n = 5) or the left anterior descending coronary artery (n = 5) in 8 patients with ischemia in the anterior wall, or the left circumflex coronary artery (n = 2) in 7 patients with ischemia in the inferior wall. A potential role of diltiazem in the treatment of VA was assessed in 7 patients. Diltiazem at a dose of 60 to 120 mg daily, was added for at least 1 month. The ischemic pattern reversed from thallium-201 uptake defect with subsequent ST-segment depression to stress-induced ischemia, as manifested by ST-segment elevation. Of 7 patients with ischemia in the anterior wall or the left circumflex coronary artery, only 1 showed improvement. These results indicate that diltiazem may be useful in VA patients with ischemic pattern of thallium-201 scintigraphy.

Structure and function of La mitochondria. Characterization of the La protein. The enzyme consists of four polypeptides that are encoded by the nuclear genome and carried to the mitochondrion by the mother enzyme. The La protein was purified from bovine liver mitochondria and characterized for the first time, although its presence in mitochondria had been suspected
